

Environmentally Friendly Surfactant Formulated for Fertigation Systems

Wetter Water is a proprietary blend of non-ionic surfactants from the oxygenated hydrocarbon family.

ProPlus has taken a unique and highly effective approach to managing hydrophobic soils.

ProPlus uses existing fertigation systems to inject surfactants so as to reduce surface tension of irrigation water droplets, thus wetting the water.

Wetter Water:

- Florida soil friendly
- Reduces chemical usage
- Reduces chemical cost
- No application labor cost
- No chance of damage due to over application
- Reduces water usage
- Saves electricity cost

Watch your hot spots disappear

Directions for use:

ProPlus surfactant was developed specifically for use through fertigation systems. Use one gallon of **Wetter Water** per 10,000 gallons of irrigation water. Most Fertigation pumps should be set at 12% the first irrigation cycle, then surfactant usage compared to irrigation water pumped. Adjust fertigation pump until correct rate is achieved.

Use once or twice a week as necessary

Usage Formula
Gallon water pumped
X .0001 =
Gallons of Surfactant

Example

500,000 gal water
X .0001 =
50 gallons of surfactant TM

Over use does not improve effectiveness and under use does not "wet the water".

Use as directed
